

CONSCIOUS REAL INTELLIGENCE

CRI Practice Guide — Instruction Manual

by Ajinkya Virgaonkar, Founder and Creator | USPTO Trademark Serial #99668381

This manual explains how to use the free Conscious Real Intelligence (CRI) practice application and how to structure a daily consciousness practice using the AWASTHA framework. The app runs entirely in your browser — no installation, no account, no cost.

Open the app: ajinkyavirg.github.io/conscious-real-intelligence

1. Getting Started

- Open the app URL in any modern browser (Chrome, Edge, Safari, Firefox) on desktop or mobile.
- Use headphones for binaural beat states — they require separate left/right ear frequencies.
- Sound begins only when you press a tone or sequence button; adjust volume with the sliders.
- The app has five tabs across the top: AWASTHA · Frequencies · Bija sequence · Knowledge graph · CRI guide.

2. Tab 1 — AWASTHA Navigator

AWASTHA (Sanskrit: *state of being*) is CRI's original framework of seven progressive states of conscious evolution plus the Threshold bridge state. Click any state button (A · W · A · S · ★ · T · H · A) to see its full description, Sanskrit name, Vedic root, prescribed Raga, time of practice, purpose, and frequency guidance.

State	Time of practice	Raga	Sound tool
Awareness (Chetana)	Pre-dawn / dawn	Bhairav	Breath, silence
Wakefulness (Jagriti)	Dawn / morning	Ahir Bhairav	432 Hz, conscious intent
Attunement (Samanvaya)	Morning / evening	Bhairavi / Yaman	Bija sequence LAM→AUM
Stillness (Sthirta)	Late night	Darbari Kanada	OM at 136.1 Hz
Threshold ★ (Svapna-Turiya)	Midnight	Bageshri	OM fading to silence
Transcendence (Atikramana)	Late morning / late evening	Todi / Kedar	AUM, 528 Hz, 40 Hz gamma
Harmony (Samarasya)	Evening / night	Bihag / Bhupali	432 Hz, integration
Acceleration (Tvarita Pragati)	Any time — integrated	Observer-guided	The observer is the instrument

3. Tab 2 — Frequency Generator

Pure consciousness frequencies are generated mathematically in the browser — no audio files. Click a frequency card to start it; click again to stop. Multiple frequencies can play simultaneously. A timer tracks your session.

Frequency	Hz	Purpose
OM / Earth resonance	136.1 Hz	Simultaneous Muladhara (grounding) + Ajna (awareness) activation
Ancient tuning	432 Hz	Natural coherence across all centres
Healing / Solfeggio	528 Hz	Anahata (heart); deep calm
Schumann resonance	7.83 Hz	Earth's electromagnetic pulse; deep meditative ground
Gamma peak	40 Hz	Peak consciousness states, insight

Binaural beat states (headphones required)

Left and right ears receive slightly different frequencies; the difference induces the target brainwave state. Available states: Deep theta (4 Hz beat — deep meditation) · Theta (7 Hz — meditative consciousness) · Alpha (10 Hz — relaxed awareness) · Gamma (40 Hz — peak consciousness).

4. Tab 3 — Bija Mantra Sequence

Bija (seed) mantras are single-syllable vibrational keys, played here as their corresponding chakra frequencies in ascending order from base to crown. Click any Bija to play it individually, or press **Auto-sequence** to move through all seven automatically. Set the duration per Bija (30 seconds to 5 minutes). The progress bar tracks the sequence; the final step — Silence — is part of the practice, not the end of it.

Bija	Chakra	Frequency	Consciousness quality
LAM	Muladhara — root	256 Hz	Groundedness, stable foundation
VAM	Svadhithana — sacral	288 Hz	Flow, creativity, emotional awareness
RAM	Manipura — solar plexus	320 Hz	Will, intent, inner fire
YAM	Anahata — heart	341 Hz	Unconditional awareness, oneness
HAM	Vishuddha — throat	384 Hz	Sound as tool, truth expression
OM	Ajna — third eye	426 Hz	Intuitive, non-local perception
Silence	Sahasrara — crown	—	Pure consciousness; rest in the stillness after sound

OM sustained tone: a separate control plays a continuous OM at 136.1 Hz with a gentle fade-in and its own timer. Use it after the Bija sequence, sustaining attention into the silence that follows — the doorway from external sound (Ahata Nada) to internal resonance (Anahata Nada).

5. Tab 4 — Knowledge Graph

An interactive map of the entire CRI framework — 40+ concepts and 60+ labeled relationships across seven categories (Core CRI, Framework, Vedic Science, Upanishads, Sound/Frequency, Modern Science, Applications).

- **Click** any node to read its full description and see all its connections listed below the graph.
- **Scroll** to zoom in and out; **drag** any node to rearrange the layout.
- Use the **category filter buttons** to focus on one layer; press **All** to restore the full graph.
- **Click the background** to reset all highlights.

6. Tab 5 — CRI Guide (AI Assistant)

An AI assistant that answers questions strictly from the CRI framework — AWASTHA, Vedic sources, sound science, and Intuition Score Capability (ISC) — rather than generic answers. It uses Groq's free API tier:

1. Create a free API key at console.groq.com → API Keys → Create (no credit card required).
2. Paste the key into the field at the top of the CRI Guide tab.
3. Your key is stored only in your own browser — never in the app code or on GitHub.
4. Ask anything, or tap a suggested question to begin.

7. A Simple Daily Practice Protocol

When	Practice
Pre-dawn / dawn	Bhairav listening or silence · alternate-nostril breath (Nadi Shodhana) · set conscious intent
Morning	Full Bija sequence LAM → Silence (1–2 min per Bija) · Bhairavi for purification
Evening	Yaman listening, 20–30 min, undistracted · OM chanting slowing into silence
Late night	Darbari Kanada · sustained OM 136.1 Hz · rest in post-sound stillness
Midnight (advanced)	Bageshri · OM fading to silence · receive without analysis (Threshold approach)

Principles: consistency matters more than duration. Two conditions must coexist for Attunement: inner stillness and configured sound frequency. Sound removes obstacles to consciousness — it does not create it. Threshold experiences are not universal; never force or expect them. CRI practice complements, and never replaces, professional health care.
